DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 50 -80, are drawn to method of making field electron emitter, classified in class 445, subclass 50.
- II. Claims 81-96, drawn to field electron emitter, classified in class 313, subclass 495.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group 1 and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of field electron emitter as claimed can be made by a different process by masking all the locations except the area for application of the first constituent which then can be applied non-selectively and then masking all locations except for that of the second constituent and applying second constituent non-selectively.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because of their divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2879

A telephone call was made to Mr. William Lee on August 18, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
